## POWDERY MILDEW RESISTANT

**RESISTANT D-2**—88 days. This new Mildew Resistant strain was developed from the No. 45, for use in the Imperial Valley. It is immune to some forms of mildew that had attacked other varieties. The D-2 is a heavy yielder and produces melons slightly larger than the No. 45. The net is heavier and rougher than most of the other strains. The flesh is deep salmon, the eating and shipping qualities are excellent—as are all other mildew resistant strains.

Prices Prepaid: Oz. 25c;  $\frac{1}{4}$  lb. 75c; 1 lb. \$2.25; 5 lbs. \$9.90; 10 lbs. \$18.00.

**Resistant No. 5**

**RESISTANT No. 5**—88 days. This new Mildew Resistant strain was used last season in the Imperial Valley of California with great success. Many of the large shippers have hailed the No. 5 as the most outstanding shipping melon. It was developed from the No. 45 and shows more resistance to certain types of mildew. The sugar content is very high and in appearance it is much like its Hale's Best parent. On account of its high sugar content it should be picked on about a three-quarter slip, if it is to be shipped long distances. For local market it will stand being picked full-slip. In appearance it is very similar to the other Mildew Resistant strains, except that the netting is more flat and finer lined, showing considerable suture.

Prices Prepaid: Oz. 25c;  $\frac{1}{4}$  lb. 75c; 1 lb. \$2.25; 5 lbs. \$9.90; 10 lbs. \$18.00.

Hale's Best

**HALE'S BEST, JUMBO**—Our Improved Jumbo Strain, 85 days. This Jumbo selection is so large that they are more adapted for roadside sale than for crating. They will average about 4½ pounds and would pack 9 or less to the jumbo flat crate. A very uniform type having a distinct stripe running from the stem to blossom end. Measuring 6½ by 6 inches they are well netted between the distinct sutures, with practically no ribs. The flesh is thick, deep salmon, sweet flavored and of the finest eating qualities.

Prices Prepaid: Oz. 25c; ¼ lb. 75c; 1 lb. \$2.25; 5 lbs. \$9.90; 10 lbs. \$18.00.

**HALE'S BEST NO. 36**—85 days. Since introduction in 1931 this variety has continued to be one of the leading strains for the market grower. So uniform in size and shape, measuring 5½ by 6 inches and packing 12 to the jumbo flat crate, there is no losses from off sizes. Very solidly netted, no ribs, and little if any sutures. The flesh is deep, very fine grained, rich, spicy and a deep salmon color. An excellent, uniform strain of Hale's Best for any requirement.

Prices Prepaid: Oz. 25c; ¼ lb. 75c; 1 lb. \$2.25; 5 lbs. \$9.90; 10 lbs. \$18.00.

**HALE'S BEST NO. 936**—85 days. Selected from the No. 36 this melon is the most uniform of all the Hale's Best strains. While many firms list this variety under various names I have yet to see a better Hale's Best strain than our No. 936. Our planting stocks are taken from the very earliest of the crown-set melons, from heavy producing plants. The melons are then selected for their uniformity in size, shape, netting and interior qualities. In this way I am able to keep this strain up to the standard that I have set for a **PERFECT HALE'S BEST**. Slightly larger than the No. 36, the No. 936 carries a perfect net; has no sectors and runs to even Jumbo sizes. The vines are very hardy and vigorous, producing a crop of perfectly uniform melons. Measuring 6 by 5½ inches they will pack 12 melons to the jumbo crate. The flesh is a rich salmon, very thick and with a very small seed cavity. One of the principal characteristics of the No. 936 is its uniformity, and high percentage of salable melons.

Prices Prepaid: Oz. 25c; ¼ lb. 75c; 1 lb. \$2.25; 5 lbs. \$9.90; 10 lbs. \$18.00.

## Cantaloupe (Continued)

**NEW IDEAL**—85 days. We originated this very select strain several years ago by crossing our Perfected Perfecto with an excellent strain of Hale's Best. The result is an early cantaloupe with the qualities of the later Perfected Perfecto. We have continued our work toward improving this strain until, today we have an ideal cantaloupe for the shipper or market grower. While we class this melon with the Hale's Best in time of maturity, we have found ripe melons in our fields 80 days from time of planting. Many large growers tell us that the New Ideal is the earliest, the most uniform and the best quality cantaloupe of its class.

The vines of the New Ideal are of medium growth but very vigorous and healthy. A very prolific producer with the first set unusually heavy. In size these melons run mostly jumbo 12's to the flat crate. They are very uniform in size and oval in shape, covered with a solid, well developed netting. The flesh is similar to the Perfected Perfecto; small seed cavity, a very deep orange-salmon color, thick meat, very firm and fine grained.

We strongly recommend that you give this fine cantaloupe a trial. We feel sure that you will be well pleased with it for market or home use.

Prices Prepaid: Oz. 25c; 1/4 lb. 75c; 1 lb. \$2.25; 5 lbs. \$9.90; 10 lbs. \$18.00.

**PERFECTED PERFECTO**—90 days. Since we introduced this high quality melon, back in 1933, we have continued to keep it the finest eating melon on the market. While later than some other melons it cannot be surpassed for the late market. It should be spaced farther apart than most cantaloupes on account of its extra strong, vigorous growth. It is highly resistant to disease and rust. The Perfected Perfecto is nearly round in shape, measuring 6 by 5½ inches, and packs 12 to 15 to the jumbo flat crate. The netting is very fine and closely laced, entirely covering the melon. Flesh is very thick, rich orange-salmon in color and edible to the rind. The seed cavity is very small and the seeds are tightly packed. A wonderful cantaloupe for local or long distance shipping.
